RE: DENIAL / DELAY NOTIFICATION — JONATHAN DAVIS (DOB 10/14/1995)

RE: Jonathan Davis Claim No: WC-8849201-99 DOB: 10/14/1995 Dear Mr. Vance, We are writing to inform you that Liberty Mutual Workers Assurance has requested a peer review of the proposed prosthetic prescription (Myoelectric Transhumeral Prosthesis) submitted by NextStep Prosthetics. Consequently, authorization for physical and occupational therapy utilizing the prosthesis has been put on temporary hold. Please note that a formal treatment gap will occur during this review period. Physical and occupational therapy sessions are suspended effective immediately until authorization is received.

Sincerely,

M. Reyes

NEW PATIENT INTAKE QUESTIONNAIRE (COMPLETED BY PATIENT)

PATIENT	DOB	MRN	DATE OF SERVICE
Jonathan Davis	10/14/1995	948-20491-A	01/10/2025

Name: Jonathan Davis

DOB: 10/14/1995

What brings you in today?

Rehab for left arm amputation and training with new prosthetic arm (finally approved!)

Pain right now (0-10): 4 Worst: 9 Best: 2

Current medications: Gabapentin 600mg TID, Tylenol Extra strength

What treatments have you already tried? Amputation Jan 2024, Neuroma surgery Nov 2024

Do you smoke? No

Alcohol use: No

Marijuana / other substances: No

Current work status: off work

How is your sleep? Poor due to phantom sensations in left hand

Patient signature: Jonathan Davis

Date: 01/10/2025

PHYSICAL THERAPY — INITIAL EVALUATION

PATIENT Jonathan Davis	DOB 10/14/1995	MRN 948-20491-A	DATE OF SERVICE 01/12/2025
---------------------------	-------------------	--------------------	-------------------------------

REFERRING DIAGNOSIS	Status post left transhumeral amputation with severe phantom limb pain, status post neuroma revision
PAIN REPORT	5

RANGE OF MOTION		
JOINT / MOTION	MEASURED	NORMAL
Left Shoulder Abduction	120	180
Left Shoulder Flexion	130	180

STRENGTH (MMT)	
MUSCLE GROUP	GRADE
Left Shoulder Abductors	3/5
Left Shoulder Flexors	4/5

FUNCTIONAL STATUS	
Gait	Antalgic, device as noted
ADLs	Modified independence, limited by pain
Work	Off full duty — restrictions per surgeon

PLAN OF CARE

Therapy 2-3x weekly for 12-18 months. Focus on range of motion, left shoulder strengthening, core stability, stump shape management, and high-level training with the myoelectric prosthesis.

PROSTHETIC CLINICAL RECORD

PATIENT Jonathan Davis	DOB 10/14/1995	MRN 948-20491-A	DATE OF SERVICE 02/05/2025
---------------------------	-------------------	--------------------	-------------------------------

SUBJECTIVE

Patient is present for delivery and initial fitting of his custom Myoelectric Left Transhumeral Prosthesis. He reports that the stump has healed excellently following the neuroma revision by Dr. Vance. No localized focal pain.

OBJECTIVE

Prosthesis delivered: Custom carbon-fiber socket, Utah Myoelectric Elbow, Motion Control MC Hand. Initial electrode calibration performed over the residual biceps and triceps muscle complexes. Patient demonstrated 80% accuracy in firing signals to open/close the hand and flex/extend the elbow.

ASSESSMENT

Successful initial fit. Excellent comfort and suspension. Control signals are clean.

PLAN

Deliver device. Patient to begin intensive physical/occupational therapy at Hope Valley to master operational controls. Follow-up here in 4 weeks.

---------------------------	-------------------	--------------------	-------------------------------

SCHEDULED DATE	STATUS	CONTACT ATTEMPT
05/12/2025	NO SHOW	Voicemail left; reschedule offered
11/10/2025	NO SHOW	Voicemail left; reschedule offered

Patient did not attend the above scheduled visits and did not respond to two of four outreach attempts. Upon return on 08/11/2025, patient attributed the lapse to holiday season workload and transportation logistics. Treating therapist counseled the patient that interruption of the strengthening phase results in measurable regression and extends the projected plan of care.

PHYSICAL THERAPY — DISCHARGE SUMMARY

PATIENT	DOB	MRN	DATE OF SERVICE
Jonathan Davis	10/14/1995	948-20491-A	06/22/2026

SUMMARY OF CARE

Patient Jonathan Davis has completed his comprehensive rehabilitation program. Over the last 18 months, he has advanced from absolute left-sided immobility to master level operation of his myoelectric upper limb prosthesis. He can independently perform ADLs, drive, and carry up to 25 lbs with the prosthetic device. Left shoulder active range of motion has restored to near normal. Discharged to return to modified light/medium duty at NSK.
